PRINTING TECHNOLOGIES

PAD PRINTING

Pad printing is used for labelling plastic, metal, wood and paper products. Small sized, high accuracy and high resolution prints can be made. The special advantage of tampon printing is the possibility of printing on curved surfaces. Tampon printing is the most popular printing method.

SCREEN

Screen printing is the method for labelling textiles, plastic and paper products with flat or flattenable surface. The ink is directly pressed on the product's surface through a gauze and fixed with 170°C heat treatment. This technology provides high colour accuracy.

TRANSFER

Transfer printing is ideal for items which cannot be screen printed due to their size or shape. The logos are printed on a transfer paper, then transferred to the item by high-temperature heat transfer press. Transfer imprints have good washing resistance and high colour accuracy.

CERAMIC & XP TECHNOLOGY

Ceramic printing is used to label mugs and glasses using special ceramic and glass points fired on high temperature. The label is applied to the product similarly to transfer printing, then fired in a furnace. The XP technology can be applied to metal and wooden items, it works the same way as ceramic printing.

UV LED TECHNOLOGY

UV LED technology is digital printing directly on the product's surface. Due to the special technology the imprints are fixed without any heat treatment, which provides instant, photo quality result. This technology can be used on metal, wooden, plastic and glass items.

EPOXY DOMING

Logos made with epoxy doming are printed on a sticker and coated with a 2 component resin. As a result, the treated surface will be very flexible and have a 3-dimensional look. Epoxy domed logos can be produced in custom shapes and are resistant to UV rays.

SUBLIMATION

This printing method can be applied to special sublimation mugs, cleaning clothes, T-shirts and beach slippers. Sublimation printing tears down virtually every wall in the path of photo quality. Logos printed with sublimation are high-resolution, detailed, bright and vivid coloured pictures.

DIGITAL

With large-format digital printing you have the possibility to label special stickers, posters, banners, or create custom shaped paper inlets for various items in photo quality. Digital prints are UV-resistant and waterproof by using corresponding raw materials.

3D ENGRAVING

3D engraving is the latest printing technology. It generates a laser focal point inside a glass item, creating bubbles caused by micro-explosions. 3D engraved graphics are ranging from one-two thousand to hundreds of thousands bubbles, depending on the detail of the logo.

ENGRAVING

This technology utilises lasers to engrave an object. The imprint's depth can be measured in a hundredth of a millimetre compared to the previous mechanical procedures. The surface of the product practically burns in the process to develop the logo. Even small logos can be printed very accurately.

EMBOSSING

Embossing uses a specially-made die under high pressure to form a raised 3D impression that allows you to literally feel the logo. Embossing can be with hot foil stamping to add texture or metallic colour to the embossed logo. Embossing can be used on leather, paper and certain wooden items.

EMBROIDERY

This procedure is for labelling textile products. Firstly, each logo must be programmed by embroidery software for the machine. Following, the logos are embroidered by the automated machines. Exact pantone colours are not achievable, due to limited thread colours.

Logos on the products of this catalogue are only exhibited for the purpose of displaying printing possibilities and are not reference for sale. Accordingly, products are merchandised without the displayed logos.

The right is reserved to deliver products that differ, in execution and in colours, from items illustrated in this catalogue. The displayed product printing parameters may differ from actual possibilities.

Products are delivered without decoration and battery, unless otherwise indicated.

Yardim^{AP791454}

37 pcs first aid kit in transparent, plastic case.
95x13x30 mm

Printing: P2 (2C, 50x20 mm)

- Max print size.
- Max print colours. (FC=full colour)
- Printing price category.
- Printing technology.

CODE	PRINTING TECHNOLOGIES
P	Pad printing
T	Transfer printing
S	Screen printing
RS	Cylindrical screen printing
C	Ceramic and XP printing
E	Engraving
3D	3D engraving
O	Embossing
BR	Embroidery
WP	Transfer printing on white base
WPC	Transfer printing on white ceramics
VS	Vinyl sticker
DO	Epoxy doming
SU	Sublimation
UV	UV Led printing
DG	Digital paper insert
VF	Vision Film printing
FP	Price includes printing with indicated technology. Excluding setup charge.
